

The MINNESOTA CONCRETE & MASONRY CONTRACTORS ASSOCIATION

# ENERGY & COST SAVING MASONRY

## For Owners, Architects & Engineers

*The proven value of masonry construction is now evident more than ever as energy costs and energy conservation requirements continue to rise. It is known that the cost of heating, cooling & maintaining a building over its life cycle is often a primary cost to an owner. This program examines new energy conservation requirements and how masonry provides current and future cost savings for owners including schools, cities, and businesses. The program includes a non-proprietary discussion of the following topics:*

1. PROVIDING SHORT AND LONG TERM CONSTRUCTION VALUE
2. REDUCING OPERATING COSTS FOR OWNERS
3. MEETING CURRENT AND FUTURE ENERGY CONSERVATION REQUIREMENTS
4. DEVELOPING ADVANCED COST SAVING MATERIALS AND METHODS
